Food

Water

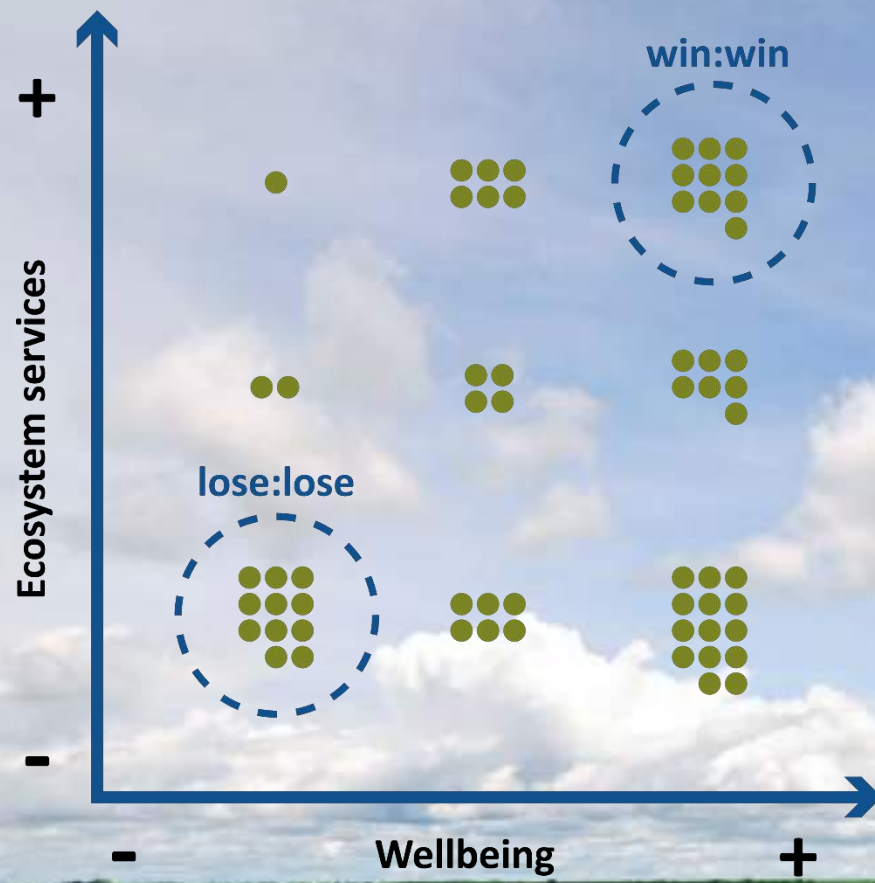

Is **intensification** the solution?

How does land use intensification affect **human wellbeing** and the **environment**?

Intensification **rarely** creates win:win outcomes...

Are these 'win:win' cases really **sustainable**?

Wealthier groups

Poor groups

Social trade-offs

Provisioning services

Regulating services

Ecological trade-offs

What is going wrong?

And what do we need to do?

Thank you
